WORK EXPERIENCE

Automation Engineer · 365.bank, a.s. · Bratislava

Mar 2025 – Present

- Designed and implemented a Python backend test automation framework integrating Robot Framework, Oracle DB, MSSQL, and Apache JMeter
- Built and maintained Jenkins CI/CD pipelines for automated smoke and regression test runs on every deployment
- Automated mobile application testing using Appium and Selenium Grid with parallel execution on physical devices
- Implemented system health checks and monitoring for critical banking services
- Conducted load/stress performance testing with Apache JMeter; analyzed results from DB logs and Dynatrace
- Owned synthetic test data generation for isolated test environments
- Led team code reviews, enforced best practices, and authored technical documentation
- Translated Jira tickets into automation strategies for new product features

QA Tester · 365.bank, a.s. · Bratislava

Sep 2022 – Mar 2025

- Tested SOAP/REST APIs (SoapUI, Postman) and frontend of a mobile banking app and web application
- Reviewed change requests and functional specifications ahead of development kickoff
- Wrote and maintained test scenarios; logged detailed defect reports in Jira
- Onboarded and mentored 3 junior testers
- Built automated regression scripts in SoapUI/Postman for the API layer

PERSONAL PROJECTS

Home Lab Server [Linux](#) · [Docker](#) · [Networking](#)

- Self-hosted server running multiple Docker-containerised services with custom networking and resource isolation
- Manages virtualisation, internal network services, and uptime monitoring across containers
- Serves as a personal sandbox for experimenting with DevOps tooling and infrastructure patterns

Dog Walk Tracker Dashboard [FastAPI](#) · [Jinja2](#) · [Tailwind CSS](#) · [PostgreSQL](#) · [Docker](#)

- Personal full-stack web app for logging and tracking dog walks, self-hosted on the home lab server
- REST API backend in FastAPI with PostgreSQL persistence; server-side rendered UI via Jinja2 and Tailwind CSS
- Containerised with Docker and integrated into the home lab environment

TECHNICAL SKILLS

Automation

Python, Robot Framework, Selenium, Playwright, Appium, Selenium Grid

API Testing

REST, SOAP, SoapUI, Postman

Databases

Oracle, MSSQL — SQL queries, log analysis, data layer testing, CRUD operations

CI/CD & DevOps

Jenkins, Git, Gitea, Docker — pipeline creation and container management

Performance

Apache JMeter, Dynatrace — load/stress testing and result analysis

Test Management
OS & Infra
Methodologies

Jira, Confluence — test analysis, documentation, ticketing

Linux (daily driver + home lab admin), basic network infrastructure

Waterfall, code review, best practices documentation

E D U C A T I O N

Computer Network Technician · Secondary Vocational School of Information Technology, Bratislava *Sep 2015 – May 2019*

L A N G U A G E S

Slovak — Native (C2) **English** — Intermediate B2 · technical documentation & professional communication
